SUBJECT : CONSOLIDATED REPORT ON THE CY 2022 2ND QUARTER PAWIKAN NESTING SITE MONITORED/MANAGED UNDER PENRO SIBUGAY

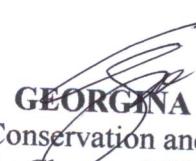

DATE : JUNE 17, 2022

Respectfully submitting to your end is the consolidated report on the conduct of Pawikan Nesting Site monitored/managed for the 2nd Quarter of CY 2022 under CENROs Zamboanga City, Imelda, and Kabasalan.

Please refer to the attached matrix for your reference.

For information and record.

For and in the absence of the PENR officer:

GEORGINA L. FERNANDEZ
Chief, Conservation and Development Section
In-Charge, Office of the PENRO

DENR, IX PENRO
IPIL, SIBUGAY
RELEASED
DATE: 06/17/2022 AM-1118
SIG. J

REGION: Zamboanga Peninsula

Period covered: 2nd Quarter, CY 2022

Instruction: The threatened species report matrix presents the consolidated and summary of field activity reports of CENROS and PENROS, including activity reports of partners organizations, on threatened species included in the Department's annual operational planning guidelines. The summary report matrix should be submitted on a quarterly basis and should be substantiated by narrative report, including the prescribed data sheets (e.g., prescribed for certain species of field offices.

Priority Threatened Species for monitoring (refer to the National Expenditure Guidelines for threatened species applicable to your region)	Population verification survey/monitoring		Habitat management		Rescue and release		Other Activities		Conclusions and recommendations (e.g. findings, issues and concerns arising from the analysis of the consolidated data, and corresponding recommendations on follow up actions to address the threats/issues or improved conservation effort)
	Location (with coordinates)	No. of individuals sighted or population count/ estimate per site	Habitat managed inside/outside Pas	Threats observed/documente d (incidence of habitat destruction, illegal hunting, illegal trade, strandings)	No. of individuals rescued/rehabilitated	No. of individuals released	Communication, Education, Participation, and Awareness (CEPA)	Partnership with other organizations	
1. Marine Turtle	1. Pandilisan Island, Payao, Zamboanga Sibugay (7°27'48"N 122°41'26"E)	One (1) Hawksbill Turtle (<i>Eretmochelys imbricata</i>)	None	None	Seventy-six (76) hatchlings	None	None	None	Findings: During the teams visit on April 22, 2022, the tracks of pawikan could not be seen for the fact that the area nested could be reach by high tide. Per interview, the Pawikan is believed to be a Hawksbill species due to its curved bill. On April 21, 2022 at around 7 am the seventy-six (76) eggs were translocated in an area (7°27'48"N 122°41'26"E) unreachable by waves or high tide.
2. Sibulan Island, Mabuhay, Zamboanga Sibugay (7°25'55"N 122°55'41"E)	None	None	None	None	None	None	None	None	Findings: In Sibulan Island during the team's visit there were not able to sight any tracks of marine turtle nest. However, per key informant interview an agar-agar growers confirmed that there were still pawikan inhabiting within the coastal waters of Tantangan Bay. There was a time when a pawikan was trapped in a fish corral yet immediately released.
3. Litayon Island, Alicia, Zamboanga Sibugay (7°27'32"N 122°57'45"E)	None	None	None	None	None	None	None	None	Findings: The team proceeded to Litayon Island to continue the conduct of monitoring activity. Unfortunately, there were no sightings of marine turtle nest in the area.

4. Sirommon Island, Barangay Dita, Zamboanga City (7°10'26"N 122°17'12"E)	None	None	None	None	None	None	None
5. Great and Little Sta. Cruz Islands Protected Landscape and Seascape, Zamboanga City (6°52'20"N 122°3'32.21"E)	Two (2) Marine turtle clutch	GLSCPLS	None	None	None	None	None
6. Tiburacao Island, Barangay Tumitus, Zamboanga City (5°1N 43°77'82.12341)	One hundred twenty-eight (128) live hatchlings of Hawksbill Turtle (<i>Eretmochelys imbricata</i>)	None	None	None	None	None	None

Findings: The team conducted the monitoring activity for pawikan nesting site at Sirommon Island, Zamboanga City area; however, there were no active nest during the visit.

Findings: The team was able to observed/record two (2) marine turtle nest/clutch. On May 6, 2022, the team conducted habitat assessment and evaluation on the Marine turtle nest/clutch using the prescriptions Annex A.1. Habitat Assessment and Evaluation form as well as interviewed a local resident and (GU-PAMO Staff on habitat survey and sightings of marine turtle within Great and Little sta. cruz Island Protected landscape and Seascape using the Annex A. Interview form.

Findings: During the teams visit, one (1) marine turtle clutch had already hatched. The One hundred twenty-eight (128) live hatchlings of Critically endangered Hawksbill turtle (*Eretmochelys imbricata*) emerged from the nesting site on May 11, 2022; however, twenty-one (21) were considered spoiled/unhatched eggs. Unfortunately, the release of hatchlings were not properly documented by the island wardens and local residents due to non-availability of mobile phone with camera. For date there are Nine (9) identified marine turtle site at Tiburacao Island.

Recommendations: In view of the nesting frequency at Tiburacao Island, the team recommends that the latter be included in the Monitoring of Nesting site for conservation and protection.

Respectfully forwarded to that end is the report from the PAMBCU with regards to the above cited subject conducted on May 3-6, 2022 at Great and Little Sta. Cruz Islands Protected Landscape and Seascape, Barangay Sta. Barbara and Sirommon Island, Barangay Dita, Zamboanga City

ACTIVITY	SUMMARY OF ACCOMPLISHMENT
MONITORING OF THREATENED SPECIES -- MARINE TURTLE NESTING SITE MONITORING SIROMMON ISLAND, BARANGAY DITA, ZAMBOANGA CITY	➤ On May 5, 2022, the PAMBCU team conducted the monitoring activity on pawikan nesting site at Sirommon Island, Dita, Zamboanga City. The team conducted interview with some of the residents in the area, however, there was no active nest during the visit. According to Mr. Tung Samson (island warden), since the last monitoring, there were no more sightings of marine

**GLSCIPLS, BARANGAY STA.
BARBARA, ZAMBOANGA CITY**

on both areas (playa Isabel and front beach area).

- On May 6, 2022, the PAMBCU team together with Allan Taup (Pump boat operator) and representative from PAMO-LGU staff went to Great Sta. Cruz Island to conduct pawikan nest site monitoring. The team was able to monitor/observed and record Two (2) Marine Turtle nest/clutch with a geographic location of longitude 122°3'32.21"E, latitude 6°52'22.10"N (beach area).

In addition, the team conducted habitat assessment and evaluation on the Marine turtle nest/clutch using the prescribed ANNEX A.1 Habitat Assessment and Evaluation form as well as interviewed Mr. Usman Hajal a local resident and LGU - PAMO staff on habitat survey and sightings of marine turtle within the Great and little Sta. Cruz Island using the ANNEX A. Interview form.

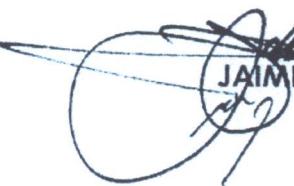

***TIGBURACAO ISLAND,
BARANGAY TUMITUS,
ZAMBOANGA CITY**

- There are Nine (9) identified active Marine turtle nest/clutch at Tigburacao Island as of to date.

On May 8, 2022, one (1) marine turtle nest clutch that was laid on March 11, 2022 hatched resulting to 149 marine turtle eggs. Only 128 hatchlings emerged and 21 were spoiled/unhatched eggs. The hatchlings were identified as hawksbill turtle, a critically endangered species.

For information and record.

MEMORANDUM

FOR : THE CENR OFFICER
CENRO ZAMBOANGA CITY
This City

FROM : THE UNDERSIGNED
This Office

SUBJECT : ACCOMPLISHMENT REPORT ON MARINE TURTLE
NESTING SITE MONITORING AT SIROMMON ISLAND,
ZAMBOANGA CITY

DATE : MAY 10, 2022

In line with the approved travel order for the period from May 4-6, 2022 re: To Conduct Monitoring of Pawikan Nesting Site at Sirommon Island, this City.

The objective of the activity is to obtain nesting site information/s through habitat assessment and evaluation, habitat survey, nesting/sighting verification and protection, and releasing of hatchlings.

The marine turtle nesting sites at Sirommon Island, Barangay Dita, Zamboanga City belongs to the critically endangered **Hawksbill turtle** (*Eretmochelys imbricata*) and **Green Sea Turtle** (*Chelonia mydas*) this was the first record of nesting incidence last 2019 to August 8, 2021.

On May 5, 2022, the team conducted the monitoring activity on pawikan nesting site at Sirromon Island, Dita, Zamboanga City. The undersigned conducted interview some of the residents in the area, however, there was no active nest during the visit. According to Tung Samson (island warden), that since the last monitoring made, there was no more sightings of marine turtles on both areas (playa Isabel and front beach area).

However, last May 8, 2022 in the morning Mr. Ahmad Sahac personnel/technical staff of OCENR informed the office regarding the hatchling incidence at Tigburacao Island. The following information was relayed to us. One (1) marine turtle nest/clutch that was laid last March 11, 2022 had already

hatched. A total of One Hundred Twenty-eight (128) live hatchlings of Critically Endangered **Hawksbill turtle** (*Eretmochelys imbricata*) emerged from the nesting site, however, Twenty-one (21) were considered spoiled/unhatched eggs. The incubation period covers Fifty-eight (58) days. Unfortunately, the releasing of hatchlings were not properly documented by the Island warden and local residents due to non-availability of mobile phone with camera.

In addition, there were Nine (9) identified active Marine turtle nest/clutch at Tigburacao island. While the eggs are on its incubation stage, they were protected using pre-fabricated enclosure (plastic screen with bamboo splits) surrounding the eggs clutch and being monitored by the local residents and island warden in the said area.

In view of the nesting frequency at Tigburacao Island, the team recommends that the latter be included in the Monitoring of Nesting Site for conservation and protection.

MEMORANDUM

FOR : THE CENR OFFICER
CENRO ZAMBOANGA CITY
This City

FROM : THE UNDERSIGNED
This Office

SUBJECT : ACCOMPLISHMENT REPORT ON MARINE
TURTLE NESTING SITE MONITORING AT STA CRUZ ISLAND,
ZAMBOANGA CITY

DATE : MAY 10, 2022

There are seven (7) species of marine turtles in the world. Six (6) of these are found in Southeast Asia. Five of these can be found in the Philippines, namely **Green sea turtle** (*Chelonia mydas*), **Hawksbill turtle** (*Eretmochelys imbricata*), **Olive ridley turtle** (*Lepidochelys olivacea*), **Leatherback turtle** (*Dermochelys coriacea*) and **Loggerhead turtle** (*Caretta caretta*). The green sea turtle, hawksbill turtle, olive ridley turtle and leatherback turtle have nesting grounds throughout the country. The loggerhead turtle on the other hand feeds on the country's rich marine resources. All five (5) species of marine turtles in the Philippines are threatened.

Marine turtles are known to have nesting fidelity throughout their reproductive years. Successful reproduction is therefore dependent on the availability of suitable nesting beaches. However, nesting beaches are threatened by continuous developments and increased human activities. This may lead to physical loss of the nesting beach itself or decline in suitability due to introduction of solid waste and other forms of disturbances that further decline the marine turtle nesting habitats.

Marine turtle nesting sites at Great and Little Sta. Cruz Island are being regularly monitored by Personnel of PAMO under LGU for Great and Little Sta. Cruz Island Protected Landscape and Seascapes. Mostly of the marine turtle eggs laid on both great and little Sta. Cruz Island are being transferred into the beach area to ensure its protection from poachers and other predators and it is carefully done by trained personnel of the PAMO-LGU. As per records of PAMO-LGU only Three (3) species of marine turtle were recorded to nest within the said area namely **Green sea turtle** (*Chelonia mydas*), **Hawksbill turtle** (*Eretmochelys imbricata*) and **Olive ridley turtle** (*Lepidochelys olivacea*) are all listed as threatened species.

The objectives of the activity is to conduct Marine turtle nesting site monitoring, Habitat assessment and evaluation, habitat survey, nesting/sighting verification and conservation and protection of marine turtle nest/eggs.

On May 6, 2022, the undersigned together with J.O. Allan Taup (Pump boat operator) and representative from PAMO-LGU staff went to Great Sta. Cruz Island to conduct the above-mentioned subject. Upon arriving in the area, the team was able to monitor/observed and record Two (2) Marine Turtle nest/clutch with a geographic location of longitude 122°3'32.21"E, latitude 6°52'22.10"N (beach area). The Marine turtle nest were laid within the area of Great and Little Sta. Cruz Island wherein the area is reached with sea water during the highest tide. The transferring of marine turtle eggs from the beach area is purposely to avoid the eggs to get spoil and also to protect from poachers and predators. The transferring of Marine turtle eggs was done carefully by trained personnel of the PAMO-LGU Great and Little Sta. Cruz Island Protected Landscape and Seascapes. While the eggs are on its incubation stage, they were protected by using pre-fabricated enclosure (plastic screen with bamboo splits) surrounding the eggs clutch and being monitored by the assigned personnel in the Island.

Moreover, the undersigned conducted habitat assessment and evaluation on the Marine turtle nest/clutch using the prescribed ANNEX A.1 Habitat Assessment and Evaluation form as well as interviewed Mr. Usman Hajal a local resident and LGU - PAMO staff on habitat survey and sightings of marine turtle within the Great and little Sta. Cruz Island using the ANNEX A. Interview form.

For information and record.

PHOTO DOCUMENTATION

Photo documentation of PAMBCU staff during marine turtle nest site monitoring: measuring the distance of nest from the highest tide mark

ANNEX A.1 HABITAT ASSESSMENT AND EVALUATION

1. Date of Assessment: May 6, 2022
2. Location: Great Sta. Cruz Island
3. GPS Coordinates: 6°52'20"N 122°3'32"E
4. (Description of Sand: black/gray white mixed others
 fine coarse with coral rubble
 mixed with soil Other findings: _____)

5. Beach Vegetation (list species in table below):

Talisay	
Piagao	
Neem tree	
Pototan	

6. Beach Measurement:

Details	Measurement	GPS Coordinates
Beach length (measure perpendicular length of marine turtle nest to the highest tide mark)	9.15 meters	6°52'20" N 122°3'32"E
Beach width (measure parallel length of beach on two points, noting only areas as possible nesting ground)	6.45 kilometers	6°52'20" N 122°3'32"E

7. Nesting abundance:
8. Marine turtle tracks seen during visit: yes no
9. Number of complete track/s (tracks coming up the beach & going down): NONE
10. Number of incomplete track/s (tracks either coming up the beach only or going down only): NONE
11. Marine turtle track details: Outer track width (cm): NONE
Inner track width (cm): NONE
12. Marine turtle nest/seen during visit: yes no
If yes, number of active nest/s: 1 number of inactive/old nest/s: NONE
13. With signs of predation: yes no
If yes, identification of possible predator: _____
14. Marine turtle hatchling tracks seen during visit: yes no
15. Marine turtle eggs seen: yes yes, but no signs of development none
16. Marine turtle egg shells seen: yes none

Other Observation during visit: NONE

ANNEX A. INTERVIEW FORM

(Habitat survey, nesting/sighting verification, pressure-state-response)

1. Petsa ng Interview: May 6, 2022
2. Lugar: Great Sta. Cruz Island

hinahayaan lang

hinuhuli at ... kinakatay ginagawang alaga / inirereport
o dinadala Awtoridad

Iba pa _____

24. Alam po ba ninyo na ipinagbabawal ang paghuli at pagkatay ng pawikan?

Oo Hindi

25. Anong ahensiya po ang alam ninyong nagpapatupad ng mga batas na ito?

DENR Fisheries Pulis/Militar / Mayor/LGU / iba
pa

26. Napapatupaad ba ang mga batas dito tungkol sa pawikan? Oo Hindi

27. May alam po ba kayo na nahuli at naparusahan dahil sa paglabag sa mga batas
ukol sa pawikan?

meron / wala

28. Ano po ang nadinig/nalaman ninyong kaparusahang ipinataw? WALA

29. Sa inyong palagay, mahalaga ba na ipagbawal ang
pagkatay/paghuli/pagbebenta ng mga pawikan? Oo Hindi

30. Bakit po kaya?

-Dahil ang mga pawikan ay kakaunti na lamang ang kanilang populasyon at
sila ay nasa kategorya na ng Endangered-Critically Endangered species, kaya
dapat na protektahan natin ang mga ito.

SUBJECT : SUBMISSION OF QUARTERLY REPORT ON THE CONDUCT
OF PAWIKAN NESTING SITES MONITORING CY 2022.

DATE : April 25, 2022

Respectfully forwarded herewith the 2nd quarter accomplishment report of the Coastal Resource Management Unit (CRMU) of this office related to the conduct of monitoring of the three identified pawikan nesting sites on April 7, 2022 at Litayon Island, Alicia and Sibulan Island wherein the team found no tracks of nesting pawikan in the two (2) aforementioned nesting sites. While in Pandilusan Island, Payao Zamboanga Sibugay one pawikan believed to be a hawksbill species nested a clutch of 76 eggs as per monitoring dated April 22, 2022.

MEMORANDUM

FOR : The CENR Officer
DENR, R-IX, Imelda, Zamboanga Sibugay

FROM : The Chief, Coastal Resource Management Unit (CRMU)
DENR, R- IX, Imelda, Zamboanga Sibugay

SUBJECT: QUARTERLY REPORT ON THE CONDUCT OF PAWIKAN NESTING SITES MONITORING CY 2022.

DATE : April 25, 2022

Respectfully submitted herewith, the 2nd quarter accomplishment report of the Coastal Resource Management Unit (CRMU) of this office related to the conduct of monitoring of the three identified pawikan nesting sites on April 7, 2022 at Litayon Island, Alicia and Sibulan Island, Mabuhay and on April 22, 2022 at Pandilusan Island, Payao all under the Province of Zamboanga Sibugay.

During the team's monitoring at Sibulan Island no tracks of nesting marine turtles were observed. However, per Key Informant Interview (KII) with Mr. and Mrs. Norman Gabilbani, agar-agar growers confirmed that there are still populations of pawikan inhabiting within the coastal waters of Tantanang Bay. In fact, there was a time when a pawikan was trapped in a fish corral owned by Mr. Melo who immediately released it.

Then the CRMU Team proceeded to Litayon Island on the same day to continue the conduct of monitoring activity. Per interview with Mr. and Mrs. Oliver Joquino the coco-farm caretaker of Mayor Musahe confirmed that he had still sighted populations of pawikan during fishing and they had found two (2) dead pawikan in the shore of the island near their area last December 2021. As per verification the team found some bones of the said dead pawikan.

On April 22, 2022 the Team went to Pandilusan Island upon noticed through phone call that there was a pawikan that nested on April 21, 2022 around 3:00o'clock in the morning.

During the team's visit, the tracks of the pawikan could not be seen for the fact that the area nested could be reach by high tide. Per interview with Mr. Jerome Roxas, Armando Amurin, the pawikan is believed to be a hawksbill species due to its curved bill. The eggs were translocated by Jumar Amurin and Marvin Moralde around 7:00o'clock in the morning in an area unreachable by waves or high tide.

On the other hand, the MENR Office informed the team that the LGU of Payao, Zamboanga Sibugay had conducted coastal clean-up in the island together with the Coastguard personnel on April 19,2022 as part of their regular activity for maintenance and conservation as the LGU is currently operating local tourism in the island. In the said event, various solid wastes were collected that covered two (2) months wastes in the island that accounted ten (10) sacks of liquor bottles, five (5) sacks of PET bottles, twenty (20) sacks of other wastes like cellophanes, food sachets and sanitary napkins and other recyclables' were deposited in the Municipal Recovery Facility (MRF) and Residual Contentment Area (RCA).

Please see attached prescribed monitoring forms and geo-tagged photo documentation.

For information and record.

() iba pa _____

24. Alam po ba ninyo na ipinagbabawal ang paghuli at pagkatay ng pawikan?

() oo () hindi

25. Anong ahensiya po ang alam ninyong nagpapatupad ng mga batas na ito?

() DENR () Fisheries () Pulis/Militar () Mayor/LGU () iba pa

26. Napapatupad ba ang mga batas dito tungkol sa pawikan? () oo () hindi

27. May alam po ba kaya na nahuli at naparusahan dahil sa paglabag sa mga batas ukol sa pawikan?

() meron () wala

28. Ano po ang nadinig/nalaman ninyong kaparusahang ipinataw?

Makulay

29. Sa inyong palagan, mahalaga ba na ipagbawal ang pagkatay/paghuli/pagbenta ng mga pawikan?

() oo () hindi

30. Bakit po kaya?

Dahil important

ANNEX A.1 HABITAT ASSESSMENT AND EVALUATION

1. Date of Assessment: April 7,2022
2. Location: **Sibulan Island,Mabuhay,Zamboanga Sibugay**
3. GPS Coordinates: 7°25' 55" N
122° 55' 41" E

4. Description of Sand: black/gray white mixed others
 fine coarse with coral rubble mixed with soil
 Other findings: None

5. Beach Vegetation (*list species in table below*):

<i>Pagatpat (Sonneratia alba)</i>	<i>Tabau (Lumnitzera littorea)</i>
<i>Bakauan Babae (Rhizophora mucronata)</i>	<i>Bantigi (Pemphis acidula)</i>
<i>Tabigi (Xylocarpus granatum)</i>	
<i>Saging-sagaing (Aegiceras floridum)</i>	
<i>Balete (Ficus balete)</i>	
<i>Coconut (cocos nucifera)</i>	

6. Beach Measurements:

Details	Measurement (meters)	GPS Coordinates
Beach length* (<i>measure perpendicular length of marine turtle nest to the highest tide mark</i>)		
Beach width (<i>measure parallel length of beach on two points, noting only areas as possible nesting ground</i>)	Beach area is narrow around 5 meters and can be covered by water during high tide	7°25'55"N/122°55'41"E

* NOTE: Add more rows if more than one nest was reported along same beach

7. Nesting Abundance: Not Known Yet
8. Marine turtle tracks seen during visit: yes None
9. Number of complete track/s (*tracks coming up the beach & going down*): None
10. Number of incomplete track/s (*tracks either coming up the beach only or going down only*): None
11. Marine turtle track details: Outer track width (cm): N/A
Inner track width (cm): N/A
12. Marine turtle nest/s seen during visit:
 If yes, number of active nest/s: 1 Number of inactive nest/s: None

13. With signs of predation () Yes (/) No

If yes, identification of possible predator: N/A

14. Marine Turtle hatchling tracks seen during visit : () yes (/) None

15. Marine Turtle egg seen: (/) Yes () Yes, But no signs of development (/) None

16. Marine Turtle egg shells seen: () (/) None

Other observation during visit: None

ANNEX C. MARINE TURTLE NESTING INCIDENCE MONITORING FORM

Location/Site (Indicate Sitio/Purok, Barangay, Municipality, Province/City): Sibulan Island, Mabuhay, Zamboanga Sibugay

Date of Monitoring: April 7, 2022

Marine turtle tracks seen: () Yes () No

Number of complete track/s (Fig. 1): N/A

Number of incomplete track/s (Fig. 2): N/A

Marine turtle track details (Fig 3): Outer track width (cm): N/A
Inner track width (cm): N/A

Marine turtle nester seen: () Yes () No

If yes, indicate species: N/A

Nest location (GPS Coordinates): N/A

Translocated: () Yes () No

If yes, indicate reason for transfer: N/A

Indicate new location: N/A

Date of Nesting	Number of Eggs (Clutch Size)	Number of Hatchling/s Emerged	Date of Emergence	Number of Hatchlings Released	Date of Release	Remarks
n/a	n/a	n/a	n/a	n/a	n/a	n/a

ANNEX A. INTERVIEW FORM

(Habitat survey, nesting/sighting verification, pressure-state-response)

1. Petsa ng Interview: April 7, 2022
2. Lugar: Litaym Island, Alicia, Zamboanga Sibugay
3. Tagatugon (respondent)
4. Pangalan Mr & Mrs. Oliver L. Joquin Edad 66 & 42 yrs
5. Kasarian (Lalaki) (Babae) Status () single () may asawa
(bilang ng anak 10)
6. Angkan (pinagmulan ng lahi) Bisaya
7. Hanap buhay Fishing & Caritahan/maintenance of coco palm of Mayor Masa
8. Tirahan Litaym Island, Alicia, ZS
9. May sariling bangka (meron) () wala () nagrerenta
10. Klase ng bangka (de-motor) () de-sagwan () iba pa
11. Laki ng bangka (metro?) 12 ft x 12 in w/7 Hp engine
Bilang ng taong pwedeng sumakay 4 persons
12. Uri/klase ng pangingisa (fishing operation) Patutuy
13. Oras/panahon ng pangingisa 4PM - 7/8 PM
14. Lugar kung saan nangingisa Tan-tanay Bay
15. Nakakita na po ba kayo ng pawikan? () oo () hindi
16. Sa buong taon, tuwing kailan kayo nakakakita ng pawikan?

Buwan (month/s of the year)	Bilang ng pawikan na nakikita	Lugar saan nakikita		Laki ng pawikan na nakikita <small>CC CC</small>	Ginagawa ng pawikan nung nakita	Uri ng pawikan nanakikita(species)	Iba pangkomento
		Pangalan ng beach	Pangalan ng dagat				
2021	2	Litaym Beach	Tan-tanay Bay	width ft x length in	washed ashore	not known	"patay na" at may nailwang men bato sa baybayin

17. Sa inyong palagay, ang dalas po ba ng mga nakikitang pawikan ay:

() dumadami () umu-unti () di nagbago

18. Sa inyong palagay, ano kaya ang dahilan nito? May namamatay

19. Kapag may nakikitang pawikan, ano po ang ginagawa ninyo?

() hinahayaan lang

() hinuhuli at ... () kinakatay () ginagawang alaga

() inirereport o dinadalasa awtoridad

() iba pa

20. May pagkakataon na po ba na may nahuli kayong pawikan sa inyong pangingisda?

() meron () wala

21. Sa anong paraan ng pangingisda mas may nahuhuling pawikan?

"Bungad" / fish corral

22. Sa buong taon, tuwing kailan kayo nakakahuli ng pawikan? wala

Buwan (month/s of the year)	Bilang ng pawikan na nakikita	Lugar saan nakikita		Laki ng pawikan na nakikita	Ginagawa ng pawikan nung nakita	Uri ng pawikan nanakikita(species)	Iba pangkomento
		Pangalan ng beach	Pangalan ng dagat				

23. Kapag may nahuhuling pawikan, ano ang ginagawa ditto?

() pinapakawalan

() dinadala sa pampang para... () katayin { } lutuin { } ibenta [presyo] } pang regalo

() gawing alaga

() dalhin sa awtoridad

() iba pa _____

24. Alam po ba ninyo na ipinagbabawal ang paghuli at pagkatay ng pawikan?

() oo () hindi

25. Anong ahensiya po ang alam ninyong nagpapatupad ng mga batas na ito?

() DENR () Fisheries () Pulis/Militar () Mayor/LGU () iba pa

26. Napapatupad ba ang mga batas dito tungkol sa pawikan? () oo () hindi

27. May alam po ba kayo na nahuli at naparusahan dahil sa paglabag sa mga batas ukol sa pawikan?

() meron () wala

28. Ano po ang nadinig/nalaman ninyong kaparusahang ipinataw?

May multa at pwedeng makuulong

29. Sa inyong palagay, mahalaga ba na ipagbawal ang pagkatay/paghuli/pagbenta ng mga pawikan?

() oo () hindi

30. Bakit po kaya?

Nakatulong sa mga tao.

ANNEX A.1 HABITAT ASSESSMENT AND EVALUATION

1. Date of Assessment: April 7,2022
2. Location: Litayon Island,Alicia,Zamboanga Sibugay
3. GPS Coordinates:7°27' 32" N
122° 57' 45" E
4. Description of Sand:() black/gray (/) white () mixed () others
 fine coarse with coral rubble mixed with soil
 Other findings:
5. Beach Vegetation (*list species in table below*):

<i>Pagatpat (Sonnata alba)</i>	<i>Dangkan (local Name)</i>
<i>Talisay (Terminalia catappa)</i>	<i>Baliw (Local Name)</i>
<i>Balok-Balok (Milletia pinnata)</i>	<i>Coconut(Cocos nucifera)</i>
<i>Wild Lagundi (Vitex trifolia)</i>	
<i>Tangisang Gubat (Local name)</i>	

6. Beach Measurements:

Details	Measurement (meters)	GPS Coordinates
Beach length* (<i>measure perpendicular length of marine turtle nest to the highest tide mark</i>)	1,562.58	7°27' 46.4" 122° 57' 44.4"
Beach width(<i>measure parallel length of beach on two points, noting only areas as possible nesting ground</i>)	7-22	7°27' 45.9" 122° 58' 48.9"

* NOTE: Add more rows if more than one nest was reported along same beach

7. Nesting Abundance :Not Known Yet
8. Marine turtle tracks seen during visit:() Yes (/) None
9. Number of complete track/s (*tracks coming up the beach & going down*): None
10. Number of incomplete track/s (*tracks either coming up the beach only or going down only*):None
11. Marine turtle track details: Outer track width (cm):N/A

Pawikan Nesting Site Monitoring at Litayon Island, Alicia, Zamboanga Sibugay

On April 7, 2022

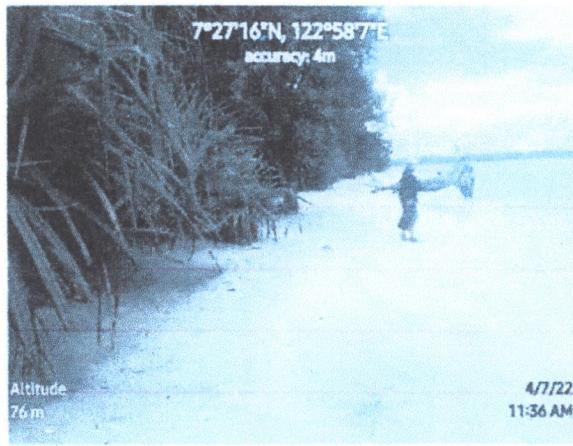

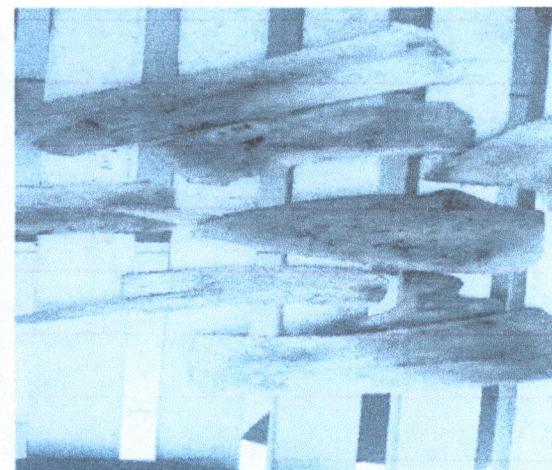

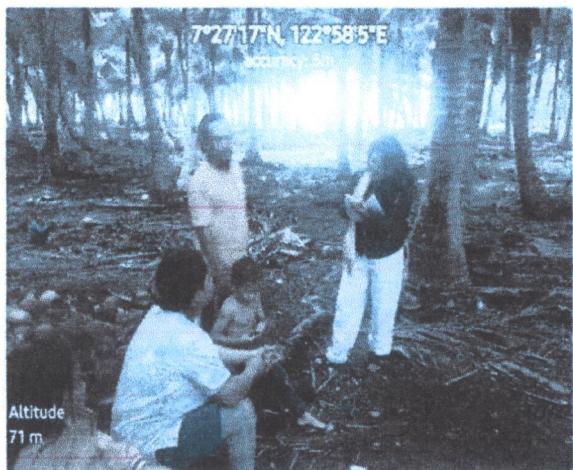

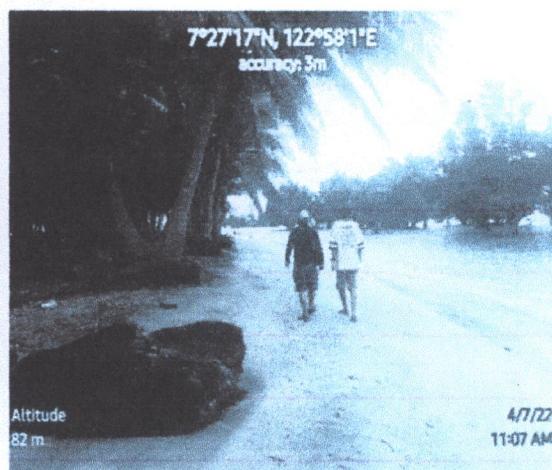

Photo Documentation

Monitoring of Nesting Site

On April 22, 2022 at Pandilusan Island, Payao, Zamboanga Sibugay

For William G. Palisoc, during an interview with Mr. Zoren Mustafa, CAFGU assigned at the island and Jerome Roxas, fisherfolks who sighted the nesting pawikan on April 21, 2022 at around 3:00 in the morning. But trans-located it since it can be reach by high tide.

The location where the clutch of 76 eggs were originally nested on April 21, 2022.

The location where the 76 pieces clutch of pawikan eggs were trans-located/

7°27'48"N, 122°41'26"E

accuracy: 5m

7°27'48"N, 122°41'26"E

Location where another pawikan was sighted on April 21, 2022 evening as sighted by Mr. but the said pawikan was unable to nest.
