**Subject: THE NOMINATION OF THE "KOVILJSKO-PETROVARADINSKI RIT"
AREA FOR A RAMSAR SITE**

APPENDIX I

**THE REVIEW OF IMPORTANT BIRD SPECIES
OF KOVILJSKO–PETROVARADINSKI RIT**

The review includes species of waterbirds from the following families: Podicipedidae, Ardeidae, Threskiornithidae, Ciconidae, Anatidae, Accipitridae.

The meaning of the symbols:

The data on bird population size in the area:

- I - number of nesting pairs
- II - number of individuals during wintering/migration

In the included table that contains data on birds (Appendix I), the maximum number of birds recorded in one day during the recent period (1999-2009) is given for each species. The maximum number of individuals during the migration and wintering is presented as the number of recorded individuals, while the number of nesting birds is estimated as the number of pairs. The total number of specimens that visited this area during the entire period of migration or wintering is manifold larger, but this number is not presented in the table due to the insufficiently accurate field data.
