Subject:      **THE NOMINATION OF THE “PEŠTERSKO POLJE” AREA FOR A RAMSAR SITE**

**APPENDIX I**

**A REVIEW OF SIGNIFICANT BIRD SPECIES IN PEŠTERSKO POLJE**

The review includes species of waterfowl from the families: Gaviidae, Podicipedidae, Ardeidae, Threskiornithidae, Ciconiidae, Anatidae, Accipitridae, Pandionidae, Falconidae, Rallidae, Gruidae, Haematopodidae, Recurvirostridae, Burhinidae, Glareolidae, Charadriidae, Scolopacidae, Stercorariidae, Laridae, Sternidae, Strigidae and Hirundinidae. The estimates of population density for several songbird species (*Passeriformes*), significant for Peštersko polje, are included at the end of the table.

The meaning of the symbols:

The data on bird population density in the area:

I - number of nesting pairs

II - number of individuals during the spring and autumn migrations

In the table included (Appendix I), a maximum number recorded during the research period 1994-2005 is given for each bird species. The maximum number of individuals during the spring and autumn migrations is presented as a number of recorded individuals, while the number of nesting places is estimated as the number of nesting pairs. The total number of individuals that visited the area during the entire migrating period is manifold larger, but this number is not presented in the table due to insufficiently accurate field data.

<b>Species</b>	<b>Status SCG</b>	<b>SPEC EUR</b>	<b>I</b>	<b>II</b>	<b>1% level</b>
<i>Tachybaptus ruficollis</i>	b/w LR:nt	Non-SPEC	?	present	3,400
<i>Ixobrychus minutus</i>	b/p VU	SPEC 3		present	2,200
<i>Nycticorax nycticorax</i>	b/p LR:cd	SPEC 3		present	1,200
<i>Ardeola ralloides</i>	b/p VU	SPEC 3		present	600
<i>Egretta garzetta</i>	b/p LR:cd	SPEC		present	580
