Ramsar Information Sheet

For Wetlands of International Importance

Site reference number: 7UK139

Compilation date: Nov 1999
Country: UK (England)
Name of wetland: Arun Valley
Site centre location: Latitude: 50 55 05 N  Longitude: 00 31 40 W
Altitude: 1-30m
Area (ha): 528.62

Overview
The Arun Valley consists of three component Sites of Special Scientific Interest. Together these sites comprise an area of wet meadows on the floodplain of the River Arun between Pulborough and Amberley. The neutral wet grassland, which is subject to winter and occasional summer flooding, is dissected by a network of ditches, several of which support rich aquatic flora and invertebrate fauna. The area is of outstanding ornithological importance notably for wintering wildfowl and breeding waders.

Wetland type
Inland wetland, Human-made wetland

Justification of criteria

Ramsar criterion 2
The site holds seven wetland invertebrate species listed in the British Red Data Book as threatened. One of these, Psuedamnicola confusa, is considered to be endangered. The site also supports four nationally rare and four nationally scarce plant species.

Ramsar criterion 3
In addition to the Red Data Book invertebrate and plant species, the ditches intersecting the site have a particularly diverse and rich flora. All five British Lemna species, all five Rorippa species, and all three British water milfoils (Myriophyllum species), all but one of the seven British water dropworts (Oenanthe species), and two-thirds of the British pondweeds (Potamogeton species) can be found on site.

Ramsar criterion 5
Internationally important waterfowl assemblage (greater than 20,000 birds)

General location
Nearest town/city
Chichester
The site lies between Pulborough and Amberley within the River Arun valley in West Sussex.
14 Physical Features

15 Hydrological values
Maintenance of water quality (removal of nutrients)
Water level management plans exist for both Amberley Wildbrooks and Waltham Brooks. A water level management plan will be pursued for Pullborough in due course.

16 Ecological features
The site comprises an area of wet meadow on the floodplain of the River Arun. The wet neutral grassland is subject to winter and occasional summer flooding. The site is dissected by a network of wet ditches which support a rich aquatic flora and invertebrate fauna. Variation in the chemical status of the water has resulted in an exceptionally high diversity of aquatic plant species in some of the ditches.

17 Noteworthy flora
Nationally important species occurring on the site.
Higher plants:
Carex vulpina, Leersia oryzoides, Potamogeton acutifolius, Myriophyllum verticillatum, Oenanthe silafa, Sium latifolium, Thelypteris palustris

18 Noteworthy fauna

Birds

Assemblages of international importance:

Over the winter the area regularly supports:

27 241 waterfowl (5 year peak mean for 1992/93 to 1996/97)

Species currently occurring at levels of national importance:

Over winter the area regularly supports:

Bewick’s Swan, Cygnus columbianus bewickii (Western Siberia/Northeastern & Northwestern Europe) 115 individuals, representing an average of 1.6% of the GB population (5 year peak mean for 1992/93 to 1996/97)

Ruff, Philomachus pugnax (Western Africa (wintering)) 40 individuals, representing an average of 5.8% of the GB population (5 year peak mean for 1992/93 to 1996/97)
Shoveler, *Anas clypeata*  
(Northwestern/Central Europe)  
260 individuals, representing an average of 2.6 of the GB population (5 year peak mean for 1992/93 to 1996/97)

Wigeon, *Anas penelope*  
(Western Siberia/Northwestern & Northeastern Europe)  
4723 individuals, representing an average of 1.7% of the GB population (5 year peak mean for 1992/93 to 1996/97)

Teal, *Anas crecca*  
(Northwestern Europe)  
2309 individuals, representing an average of 1.7% of the GB population (5 year peak mean for 1992/93 to 1996/97)

Pintail, *Anas acuta*  
(Northwestern Europe)  
389 individuals, representing an average of 1.4% of the GB population (5 year peak mean for 1992/93 to 1996/97)

Invertebrates.

**Nationally important species occuring on the site.**  
*Psuedannicola confusa, Sciomyzia drymyzina, Anius vorticulus, Psisidium pseudophaerium, Libellula fulva, Hydrophilus piceus, Paraphotistus nigricornis*

Site vulnerability and management statement
Sympathetic management of the lowland wet grassland/grazing marsh is essential to achieving favourable conservation status for the Arun Valley SPA and Ramsar site. Much of the site is currently under appropriate management through organisations such as the Sussex Wildlife Trust and the RSPB. Nonetheless, influencing private landowners and their management will continue to be important, particularly with regard to areas used for wildfowling (the terms of which are under re-negotiation).

Appropriate summer grazing, control of fertiliser applications and ditch management are the key elements of management within the valley. Another vital facet of management is the hydrology of the area. Changes to the hydrology, including drainage improvements, canalisation of the River Arun (carried out in the late 1960s) and water abstraction from the Greensand aquifer for domestic use (since the mid 1970s) has led to the subsequent drying out of the area and an intensification of agricultural use. Agricultural changes, including an increase in area of silage cut and the application of fertiliser and pesticides, have had a profound effect on the bird and plant life of the whole valley. Management will continue to address these effects by water level control and grazing regimes, through Site Management Statements and Water Level Management Plans.

Current scientific research/survey/monitoring and facilities

Fauna
Numbers of migratory and wintering wildfowl and waders are monitored annually as part of the national Wetland Birds Survey (WeBS) organised by the British Trust for Ornithology, Wildfowl & Wetlands Trust, the Royal Society for the Protection of Birds and the Joint Nature Conservation Committee.
Ongoing mollusc survey.

Habitat
Ditch survey (Pullborough & Amberley)
Water level and water quality monitoring is carried out by the Environment Agency, Sussex Wildlife Trust and the Royal Society for the Protection of Birds.

Current conservation education
The Sussex Wildlife Trust, RSPB and Arun Valley Countryside Project make use of the site for educational purposes, both formal and informal. Amberley Wildbrooks is also used for ongoing studies by Sussex University
A visitor centre and bird hides exist at Pullborough Brooks RSPB reserve. Some interpretation facilities are specifically targeted at school parties.

Current recreation and tourism
Recreational activities: bird-watching, walking.
Facilities provided: visitor centre, bird hides, tea shop.
