Information Sheet on Ramsar Wetlands (RIS)

Categories approved by Recommendation 4.7, as amended by Resolution VIII.13 of the Conference of the Contracting Parties.

Note for compilers:
1. The RIS should be completed in accordance with the attached Explanatory Notes and Guidelines for completing the Information Sheet on Ramsar Wetlands. Compilers are strongly advised to read this guidance before filling in the RIS.
2. Once completed, the RIS (and accompanying map(s)) should be submitted to the Ramsar Secretariat. Compilers are strongly urged to provide an electronic (MS Word) copy of the RIS and, where possible, digital copies of maps.

1. Name and address of the compiler of this form:
   
   Joint Nature Conservation Committee  
   Monkstone House  
   City Road  
   Peterborough  
   Cambridgeshire  
   PE1 1JY  
   UK  
   Telephone/Fax: +44 (0)1733 – 562 626 / +44 (0)1733 – 555 948  
   Email: RIS@JNCC.gov.uk

2. Date this sheet was completed/updated:  
   09 March 2006

3. Country:  
   UK (Scotland)

4. Name of the Ramsar site:  
   South Uist Machair and Lochs

5. Map of site included:  
   Refer to Annex III of the Explanatory Notes and Guidelines, for detailed guidance on provision of suitable maps.

   a) hard copy (required for inclusion of site in the Ramsar List): yes ✓ -or- no

   b) digital (electronic) format (optional): Yes

6. Geographical coordinates (latitude/longitude):  
   57 18 50 N 07 20 00 W

7. General location:  
   Include in which part of the country and which large administrative region(s), and the location of the nearest large town.

   Nearest town/city: Benbecula

   South Uist Machair and Lochs, which includes Lochs Druidibeg, a’ Machair and Stilligarry, lies on the west coast of South Uist in the Outer Hebrides.

   Administrative region: Western Isles / Na h-Eileanan an Iar

8. Elevation (average and/or max. & min.) (metres):  
   Min. -1  
   Max. 38  
   Mean 6

9. Area (hectares): 5019.05
10. **Overview:**

Provide a short paragraph giving a summary description of the principal ecological characteristics and importance of the wetland.

South Uist Machair and Lochs Ramsar site is a complex site along the west coast of South Uist. This area is of outstanding importance for its transition of habitats from acidic moorland to the calcareous coastal plain, and for the transition from freshwater habitats to saltwater habitats. This complex includes outstanding examples of, moving seawards, relict woodland, moorland and blanket bog, large oligotrophic lochs, acidic blacklands, wet and dry machair with eutrophic machair lochs, freshwater marsh, saltmarsh, coastal dunes and sandy rocky shores. These areas are of outstanding importance for their populations of wintering and breeding waterfowl.

11. **Ramsar Criteria:**

Circle or underline each Criterion applied to the designation of the Ramsar site. See Annex II of the *Explanatory Notes and Guidelines* for the Criteria and guidelines for their application (adopted by Resolution VII.11).

1, 2, 6

**Secretariat comment:** The RIS provides information requiring the application of Criterion 4. This needs to be included in the next update.

12. **Justification for the application of each Criterion listed in 11. above:**

Provide justification for each Criterion in turn, clearly identifying to which Criterion the justification applies (see Annex II for guidance on acceptable forms of justification).

**Ramsar criterion 1**

The site contains some of the finest examples of a continual gradient from marine to freshwater habitats and is of outstanding biological and geomorphological significance through containing the largest machair system in Britain.

**Ramsar criterion 2**

The site supports an assemblage of rare wetland plants and animals. The flora includes at least four Nationally Scarce vascular plants, slender naiad *Najas flexilis*, cowbane *Cicuta virosa*, slender-leaved pondweed *Potamogeton filiformis* and Baltic rush *Juncus balticus*. The fauna includes otter *Lutra lutra* and salmon *Salmo salar*.

**Ramsar criterion 6 – species/populations occurring at levels of international importance.**

**Qualifying Species/populations (as identified at designation):**

**Species regularly supported during the breeding season:**

- *Dunlin*, *Calidris alpina schinzii*, Baltic/UK/Ireland: 382 pairs, representing an average of 3.5% of the breeding population (2000)

**Species with peak counts in winter:**

- *Ringed plover*, *Charadrius hiaticula*, Europe/Northwest Africa: 66 individuals, representing an average of 0.2% of the GB population (5 year peak mean 1998/9-2002/3)

Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the Wetland Bird Survey report, which is updated annually. See www.bto.org/survey/webs/webs-alerts-index.htm.
13. **Biogeography** (required when Criteria 1 and/or 3 and/or certain applications of Criterion 2 are applied to the designation):

Name the relevant biogeographic region that includes the Ramsar site, and identify the biogeographic regionalisation system that has been applied.

a) **biogeographic region:** Atlantic

b) **biogeographic regionalisation scheme** (include reference citation):

14. **Physical features of the site:**

Describe, as appropriate, the geology, geomorphology; origins - natural or artificial; hydrology; soil type; water quality; water depth, water permanence; fluctuations in water level; tidal variations; downstream area; general climate, etc.

**General description of the Physical Features:**

South Uist Machair and Lochs is a complex site of outstanding importance for its transition of habitats from acidic moorland to the calcareous coastal plain, and for the transition from freshwater to saltwater habitats. This complex includes outstanding examples of relict woodland, moorland and blanket bog, large oligotrophic lochs, acidic blacklands, wet and dry machair with eutrophic machair lochs, freshwater marsh, saltmarsh, coastal dunes and sandy and rocky shores.

15. **Physical features of the catchment area:**

Describe the surface area, general geology and geomorphological features, general soil types, general land use, and climate (including climate type).

South Uist Machair and Lochs is a complex site of outstanding importance for its transition of habitats from acidic moorland to the calcareous coastal plain, and for the transition from freshwater to saltwater habitats. This complex includes outstanding examples of relict woodland, moorland and blanket bog, large oligotrophic lochs, acidic blacklands, wet and dry machair with eutrophic machair lochs, freshwater marsh, saltmarsh, coastal dunes and sandy and rocky shores.

16. **Hydrological values:**

Describe the functions and values of the wetland in groundwater recharge, flood control, sediment trapping, shoreline stabilization, etc.

No special values known
17. **Wetland types**

Inland wetland, Marine/coastal wetland

18. **General ecological features:**

Provide further description, as appropriate, of the main habitats, vegetation types, plant and animal communities present in the Ramsar site.

South Uist Machair & Lochs is a complex site along the west coast of South Uist, which is of outstanding importance for its transition of wetland habitats from blanket bog to calcareous coastal plain, and for the transition through freshwater to saltwater habitats. The site has outstanding examples of blanket bog, large oligotrophic lochs, acidic blacklands, wet and dry machair with machair lochs, freshwater marsh, saltmarsh, coastal dunes and sandy and rocky shores.

The machair areas include wet and dry machair, some of which is uncultivated. Together with the associated marsh, fen and eutrophic machair lochs the coastal plain supports a rich and diverse range of plant communities, including some locally or nationally scarce plants. The estuarine and brackish water habitats of the Howmore River, Loch Roag and the freshwater Loch Fada show one of the best examples of gradation from estuarine to freshwater habitats, along with associated gradation of flora and fauna, in Great Britain. Loch Bee is the largest brackish loch in the Western Isles and exhibits a gradation in salinity from freshwater to seawater. The coast, machair, lochs and blackland are of considerable ornithological importance for wintering and breeding birds.

19. **Noteworthy flora:**

Provide additional information on particular species and why they are noteworthy (expanding as necessary on information provided in 12. Justification for the application of the Criteria) indicating, e.g. which species/communities are unique, rare, endangered or biogeographically important, etc. Do not include here taxonomic lists of species present – these may be supplied as supplementary information to the RIS.

**Assemblage.**

The site is internationally important because it supports the following Habitats Directive Annex I features:

- H1150 Coastal lagoons
- H1210 Annual vegetation of drift lines
- H2120 Shifting dunes along the shoreline with *Ammophila arenaria* (“white dunes”)
- H2130 Fixed dunes with herbaceous vegetation (“grey dunes”)
- H2190 Humid dune slacks
- H21A0 Machairs
- H3110 Oligotrophic waters containing very few minerals of sandy plains (*Littorelletalia uniflorae*)
- H3130 Oligotrophic to mesotrophic standing waters with vegetation of the *Littorelletea uniflorae* and/or of the *Isoëto-Nanojuncetea*
- H3140 Hard oligo-mesotrophic waters with benthic vegetation of *Chara* spp.
- H3150 Natural eutrophic lakes with *Magnopotamion* or *Hydrocharition*-type vegetation

Internationally important species occurring on the site:

- S1833 *Najas flexilis*  Slender naiad (Habitats Directive Annex II species)
Nationally important species occurring on the site:

**Higher Plants.**
Potamogeton filiformis, Cica virosa, Juncus baltica

Lower Plants.
Chara spp.

---

**20. Noteworthy fauna:**
Provide additional information on particular species and why they are noteworthy (expanding as necessary on information provided in 12. Justification for the application of the Criteria) indicating, e.g. which species/communities are unique, rare, endangered or biogeographically important, etc., including count data. Do not include here taxonomic lists of species present – these may be supplied as supplementary information to the RIS.

**Birds**

**Species currently occurring at levels of national importance:**

**Species regularly supported during the breeding season:**

- Corn crake, *Crex crex*, Europe
  - 15 individuals, representing an average of 2.5% of the GB population (5 year mean 1993-1997)

- Little tern, *Sterna albifrons albifrons*, W Europe
  - 24 apparently occupied nests, representing an average of 1.2% of the GB population (Seabird 2000 Census)

- Ringed plover, *Charadrius hiaticula hiaticula*, breeding in southern Scandinavia/Baltic, British Isles, N & E continental Europe; wintering in Europe, Med. & N Africa
  - 393 pairs, representing an average of 2.5% of the biogeographic breeding population (Count as at 1995)

**Species Information**

**Internationally important species occurring on the site.**

S1355  *Lutra lutra*  Otter (Habitats Directive Annex II species)

**Nationally important species occurring on the site.**

**Invertebrates.**

-Bombus distinguendus, Lycia zonaria, Colletes floralis, Thanatophilus dispar-

---

**21. Social and cultural values:**

e.g. fisheries production, forestry, religious importance, archaeological sites, social relations with the wetland, etc. Distinguish between historical/archaeological/religious significance and current socio-economic values.

- Aesthetic
- Aquatic vegetation (e.g. reeds, willows, seaweed)
- Archaeological/historical site
- Environmental education/interpretation
- Livestock grazing
- Non-consumptive recreation
- Scientific research
- Sport fishing
- Sport hunting
- Tourism
- Traditional cultural

24. Factors adversely affecting the site’s ecological character, including changes in land (including water) use and development projects:

Explanation of reporting category:
1. Those factors that are still operating, but it is unclear if they are under control, as there is a lag in showing the management or regulatory regime to be successful.
2. Those factors that are not currently being managed, or where the regulatory regime appears to have been ineffective so far.

NA = Not Applicable because no factors have been reported.

<table>
<thead>
<tr>

<td>+</td>
<td>+</td>
<td>+</td>
</tr>
</tbody>
</table>

For category 2 factors only.
What measures have been taken / are planned / regulatory processes invoked, to mitigate the effect of these factors?

Is the site subject to adverse ecological change? YES
25. **Conservation measures taken:**
List national category and legal status of protected areas, including boundary relationships with the Ramsar site; management practices; whether an officially approved management plan exists and whether it is being implemented.

<table>
<thead>
<tr>
<th>Conservation measure</th>

</tr>
</tbody>
</table>

26. **Conservation measures proposed but not yet implemented:**
e.g. management plan in preparation; official proposal as a legally protected area, etc.

No information available

27. **Current scientific research and facilities:**
e.g. details of current research projects, including biodiversity monitoring; existence of a field research station, etc.

**Fauna.**
Research on effects of hedgehogs on breeding waders. Corncrake surveys (RSPB) annual.
Greylag goose breeding monitoring on Loch Druidibeg NNR.
Invertebrates: Survey of *Bombus distinguendus* in 1997 and ongoing.

**Flora.**
Trial rabbit exclusion zones to gauge effects of grazing and burrowing on machair.

28. **Current conservation education:**
e.g. visitor centre, observation hides and nature trails, information booklets, facilities for school visits, etc.

There are interpretive panels, a reserve leaflet, and a limited number of guided walks for visitors and organised parties on the Loch Druidibeg NNR section of the site.

29. **Current recreation and tourism:**
State if the wetland is used for recreation/tourism; indicate type(s) and their frequency/intensity.

**Activities, Facilities provided and Seasonality.**

**Land-based recreation:**
Walking, including dog-walking, birdwatching and mammal watching occur, at a fairly low level, over much of the site, all year. The south-western corner of Loch Druidibeg has restricted access during the spring and summer, to reduce disturbance to breeding birds.
South Uist Estates shoot wildfowl over the part of the site they own. The season is from 1 September to 12 February inclusive.

**Water-based recreation:**
Shooting season 12 August-20 February.
Angling occurs from both shore and boat. Again this mainly occurs from April to September. It is restricted on Loch Druidibeg and no boats are allowed there.

30. **Jurisdiction:**
Include territorial, e.g. state/region, and functional/sectoral, e.g. Dept. of Agriculture/Dept. of Environment, etc.

Scottish Executive, Environment and Rural Affairs Department
