Ramsar Information Sheet

For Wetlands of International Importance

Date of designation: 04/10/98

Site reference number: 7UK103

Compilation date: Feb 1999

Country: UK (England)

Name of wetland: Alde-Ore Estuary

Site centre location: Latitude: 52°04'58" N Longitude: 01°33'03" E

Altitude: Not being submitted

Area (ha): 2546.99

Overview

The site comprises the estuary complex of the rivers Alde, Butley and Ore, including Havergate Island and Orfordness. There are a variety of habitats including, intertidal mudflats, saltmarsh, vegetated shingle (including the second largest and best preserved area in Britain at Orfordness), saline lagoons and semi-intensified grazing marsh. The Orfordness/Shingle Street land form is unique within Britain in combining a shingle spit with a cuspatc foreland. The site supports nationally-scarce plants, British Red Data Book invertebrates, and notable assemblages of breeding and wintering wetland birds.

UK

Telephone/Fax: +44(0) 1733 562626 / +44(0) 1733 555948

Justification of criteria

Ramsar criterion 2a

The site supports a number of nationally-scarce plant species and British Red Data Book invertebrates.

Ramsar criterion 3b

The site supports a notable assemblage of breeding and wintering wetland birds.

Ramsar criterion 3c

During the Breeding Season the site regularly supports internationally important populations of:
Lesser Black-backed Gull Larus fuscus
Over winter the site regularly supports internationally important populations of: Avocet Recurvirostra avosetta, Redshank Tringa totanus

General location

Alde-Ore Estuary
Ramsar Information Sheet: 7UK103
Nearest town/city: Woodbridge
Alde-Ore Estuary is located on the east coast of Suffolk, east of Woodbridge, stretching between Aldeburgh to the north and Bawsey to the south.

**Administrative Region:** Suffolk

### 14 Physical Features

<tr>
<td>Summary of main climatic features</td>
<td>Rainy, temperate climate with a mild winter and periodic frost. Mean minimum temperature approximately 7.8°C. Mean maximum temperature approximately 14.7°C. Mean annual precipitation approximately 548.7mm, with a winter maximum.</td>
</tr>
</tbody>
</table>

### 15 Hydrological values

Shoreline stabilisation and dissipation of erosive forces

### 16 Ecological features

The main habitat types of the Alde-Ore Estuary are: intertidal mudflats, saltmarsh, reedswamp, coastal freshwater, brackish lagoons, semi-improved grazing marsh, brackish ditches and vegetated shingle, the second largest and best-preserved example in Britain.

A unique feature for East Anglian beaches is the abundance on the ground of normally epiphytic lichens.

There is a zonation of shingle vegetation from shifting to more stable areas of grassland and lichen communities.

Areas of saltmarsh succeed to higher saltmarsh and neutral grassland with ditches.

There is a series of brackish lagoons and ditches; and borrow pits.

### 17 Noteworthy flora

**Nationally important species occurring on the site.**

**Higher Plants.**

*Althaea officinalis*, *Frankenia laevis*, *Lathyrus japonicus*, *Lepidium latifolium*, *Medicago minima*, *Parapholis incurva*, *Puccinellia fasciculata*, *Ruppia cirrhosa*, *Sarcocornia perennis*, *Sonchus palustris*, *Trifolium suffocatum*, *Vicia lutea* and *Zostera angustifolia*.

### 18 Noteworthy fauna

**Birds**

**Species occurring at levels of international importance (as identified at designation):**

**During the breeding season the area regularly supports:**

Lesser Black-backed Gull, *Larus fuscus* (Western Europe/Mediterranean/Western Africa) 14070 pairs, representing an average of 11.3% of the breeding population (5 year mean. 1994-1998)

**Over winter the area regularly supports:**

Avocet, *Recurvirostra avosetta* 766 individuals, representing an average of 1.1%
(Western Europe/Western Mediterranean (breeding))

Redshank, Tringa totanus
(Eastern Atlantic (wintering))

of the population (5 year peak mean 1991/92-1995/96)

1919 individuals, representing an average of 1.1% of the population (5 year peak mean 1991/92-1995/96)

Species currently occurring at levels of national importance:

During the breeding season the area regularly supports:

Avocet, Recurvirostra avosetta
(Western Europe/Western Mediterranean (breeding))

104 pairs, representing an average of 23.1% of the GB population (5 year mean 1990-1994)

Little Tern, Sterna albifrons
(Eastern Atlantic (breeding))

48 pairs, representing an average of 2% of the GB population (5 count mean, 1993-4, 1996-8)

Marsh Harrier, Circus aeruginosus

3 pairs, representing an average of at least 1.9% of the GB population (5 year mean 1993-1997)

Sandwich Tern, Sterna sandvicensis
(Western Europe/Western Africa)

169 pairs, representing an average of 1.2% of the GB population (5 year mean 1991-1995)

Over winter the area regularly supports:

Black-tailed Godwit, Limosa limosa islandica
(Iceland (breeding))

268 individuals, representing an average of 3.6% of the GB population (5 year peak mean 1991/92-1995/96)

Shelduck, Tadorna tadorna
(Northwestern Europe)

1059 individuals, representing an average of 1.4% of the GB population (5 year peak mean 1991/92-1995/96)

Shoveler, Anas clypeata
(Northwestern/Central Europe)

106 individuals, representing an average of 1.1% of the GB population (5 year peak mean 1991/92-1995/96)

Spotted Redshank, Tringa erythropus
(Europe/Western Africa)

3 individuals, representing an average of 2.5% of the GB population (5 year peak mean 1991/92-1995/96)

Teal, Anas crecca
(Northwestern Europe)

1931 individuals, representing an average of 1.4% of the GB population (5 year peak mean 1991/92-1995/96)

White-fronted Goose, Anser albifrons albifrons
(Northwestern Siberia/Northeastern & Northwestern Europe)

97 individuals, representing an average of 1.6% of the GB population (5 year peak mean 1991/92-1995/96)

Wigeon, Anas penelope
(Western Siberia/Northwestern/Northeastern Europe)

4366 individuals, representing an average of 1.6% of the GB population (5 year peak mean 1991/92-1995/96)

Nationally important species occurring on the site.

Invertebrates.
Malacosoma castrensis, Campsicnemus magius, Cheilosia velutina, Empis prodromus, Dixella attica, Hylaexs euryscapu, Pseudamnicola confusa, Nematoetella vectensis, Gammarus insensibli, Euophrys browningi, Baryphyma daffeyi, Haplodrassus minor, Trichoncus affinis.

24 Conservation measures proposed but not yet implemented
see below

Site vulnerability and management statement
The area is vulnerable to sea-level rise and coastal squeeze. These issues are being addressed through The Environment Agency Local Environment Action Plan, the estuary Management Plan and possibly managed retreat. Human disturbance from recreation is minimal as this is a reasonably robust system. Flood defence policy will need to take into account risks to the site from flooding and of flood control alleviation measures. Shooting is controlled through a management plan. A considerable part of the site is managed sympathetically by Suffolk Wildlife Trust, National Trust, Royal Society for the Protection of Birds and English Nature.

25 Current scientific research/survey/monitoring and facilities

Fauna.
Numbers of migratory and wintering wildfowl and waders are monitored annually as part of the national Wetland Birds Survey (WeBS) organised by the British Trust for Ornithology, Wildfowl & Wetlands Trust, the Royal Society for the Protection of Birds and the Joint Nature Conservation Committee.

Environment.
Monitoring estuarine processes.
Saline lagoon survey.
Study on the effects of guanofication on shingle flora.

26 Current conservation education
None.

27 Current recreation and tourism

Activities.
The site is used informally for walking, boating and angling.
Facilities provided.
River moorings.
Seasonality.
Walking and boating activities are predominantly in spring and summer. Seasonal (winter) wildfowling occurs on the estuary.

28 Functional jurisdiction
Department of the Environment, Transport and the Regions

29 Management authority
English Nature
